

Mixer Pump MP 25^{MIXIT}

MP 25^{MIXIT}

The MP 25^{MIXIT} mixing pump is the allrounder among plastering machines from Putzmeister. Whether you're working with sack material, silos or containers. The MP 25 processes all pumpable premixed dry mortar.

The MP 25^{MIXIT} is a fully equipped, reliable mixer pump that is ideally suited to the construction site for back and silo material.

Putzmeister

MP 25^{MIXIT} – high-performance, low-cost

2

The MP 25^{MIXIT} is quickly disassembled into easy-to-handle and portable structural components.

MP 25 has been well-known for many years in the mixer pump trade for unrestricted operational possibilities and for easy disassembly of the machine.

Putzmeister mixer pumps are some of the most versatile machines of this type on the market.

And this is also true for the M 25^{MIXIT}. It handles **all pumpable ready-mixed mortars** such as ground coat plasters, adhesive mortars, reinforcement mortars, refractory mortars and texturing plasters etc. – **both inside and outside.**

Being a typical Putzmeister mixer pump, you can also **completely disassemble** the MP 25^{MIXIT} **with effortless ease.** The modular groups can then be easily loaded into an estate car or carried up to the upper storey on the construction site. There the hoses are connected up and work can begin!

Operation is then just simple. Set the water, start up, open the mortar valve... all this just from one side of the machine.

With a conveying performance of up to 25 l/min and an operating pressure of 40 bar, the MP 25^{MIXIT} offers **enough performance for a normal day on the construction site.** The well-proven low-wearing „Power Pump“ also contributes considerably towards this.

Many mixer pumps have shown in the field that they stir up a great deal of material dust whilst mixing. But this is not the case with the MP 25^{MIXIT}. It can be driven to almost 100% empty without any danger of dust and segregation. The result is a better mortar quality and less dust.

Incidentally, the MP 25^{MIXIT} offers a **complete standard equipment** with a water pump, D6 power worm parts, a 15 m mortar hose and a 15 m air hose as well as a fine plaster spray gun with swivel coupling, etc.

So you see, you're getting a powerful mixer pump that is immediately ready for operation – and all this for an amazingly favourable price.

3

These structural components can then easily be carried in your estate car. Even narrow flights of steps are no longer a problem.

4

Material vessel and mixer pipe are separated from each other. They open the valve and the dry material enters the mixing chamber.

Technical Data MP 25^{MIXIT}

Conv. perform.	up to 25 l/min
Conv. pressure	40 bar
Max. conv. distance*	40 m
Max. vertical height*	15 m
Mixing pump drive	el. motor 5.5 kW, 400 V, 50 Hz
Drive star-wheel	el. motor, 1.1 kW
Waterpump	3.4 m ³ /h, 0.78 kW
Compressor	200 l/min, 0.55 kW
Hopper content	115 l
Weight	240 kg
Dimensions (L x W x H)	1,324 x 728 x 1,443 mm

Part no. **111 417.168**

- Plastering machines
- Fine plaster spraying pumps and paint pumps
- Screed pumps
- Professional high-pressure cleaners
